

PROFESSIONAL SUMMARY

System Administrator for 6 years of experience in Hibret Bank. In the area of Configuring, monitoring, upgrading and minting system hardware, software and related infrastructure and taking different trainings CCNA, Red Hat, Microsoft window server 2019, I have obtained various certifications that enhance my technical proficiency. These include qualifications in Oracle Cloud Infrastructure, VMware products (Horizon and Workspace ONE), and Cisco Networking (CCNA and other specialized courses). I have also completed several courses offered by IBM that cover topics such as cybersecurity, cloud computing, and Linux systems. My continuous learning reflects my commitment to staying updated with industry advancements and best practices. Overall, my Educational background, extensive hands-on experience, and ongoing pursuit of knowledge enable me to contribute effectively to the ever evolving field of information technology.

Key Skills

- Configuring, monitoring, upgrading and minting system hardware, software and relate Infrastructure
- Giving Cisco Certified Network Associate Training
- Basic computer experience and skill of Windows server
- Designing logical and physical network topologies
- Designing network
- Configuring switching Cisco switch
- Configuring switching and routing on Cisco L3 switch
- Configuring routing on Cisco switch
- Troubleshooting network problems
- Designing a server infrastructure
- Implementing server infrastructure
- Installing, Configuring and Administering Windows server 2008
- Installing, Configuring and Administering Windows server 2012
- Installing, Configuring and Administering Windows server 2012R2
- Configuring Windows server services
- Installing and Configuring Microsoft Windows active directory system
- Installing and Configuring Microsoft Windows DHCP and DNS system
- Installing and Configuring Microsoft Windows server active directory
- Configuring and administering blade server
- Administering, managing, and Installing Linux Red Hat, and Ubuntu servers
- Configure video Conferencing servers
- Administer video Conferencing and smart room
- System Monitoring.

Educational Qualification

No	Award (B.Sc., BA)	Field of Study
1	B.Sc.	Electrical and Computer Engineering (Computer Engineering)
2	M.A	Project Management
3	M.Sc.	Software Engineering

TRAINING

- Introduction to Oracle Cloud Infrastructure (OCI) Networking & Object Storage
- VMware Horizon - Anywhere, Anytime Access with Virtual Desktops and Apps
- VMware Workspace ONE - Anywhere Workspace Platform
- Cisco Certified Associate CCNAV 7 Certified from Pakistan CISCO Networking Academy
- CCNAV7: Bridging For completing the Cisco Networking Academy
- Microsoft Window Server 2019 Administration from AZ Association plc
- Microsoft Exchange Server 2019 Administration from AZ Association plc
- Cisco Certified Associate CCNA Certified from Deber Berhan University CISCO Regional Networking Academy
- Cyber security Essentials from completing the Cisco Networking Academy
- NDG Linux Unhatched and Essentials course from completing the Cisco Networking Academy
- Introduction to Cloud Computing from IBM
- Introduction to Cyber Security Tools & Cyber Attacks from IBM
- Cyber security Roles, Processes & Operating System Security from IBM
- Technical Support Fundamentals from IBM
- Linux Fundamentals from Coursera
- Managing Linux Systems from Coursera
- Securing Linux Systems from Coursera
- VMware Vsan –Storage Solution for a Private Cloud
- Cisco SD-Wan Controller Onboarding

WORKING EXPERIENCE

No	Organization	Position
1	Hibret Bank S.C,	System Administrator II
2	Hibret Bank S.C,	System Administrator I
3	Hibret Bank S.C,	Hardware Engineer I
4	Hibret Bank S.C,	Associate Hardware Engineer
5	Addis ketema Sub city woreda 7 Administration	Cooperating and Labor, Social Affair Manager
6	Addis ketema Sub city woreda 7 Administration	IT Officer
7	ICT Instructor and Office Assistant	Express Hotel Tourism and Technology College

1. System Administrator II

Hibret Bank S.C,

May 23/2025 to Current

• A System Administrator is a crucial IT professional responsible for managing, maintaining, and supporting an organization's IT infrastructure. This role encompasses a wide range of tasks, including configuring and monitoring servers, installing software, implementing security measures, and ensuring the reliability and performance of system resources. System Administrators troubleshoot hardware and software issues, manage user accounts, and oversee backup and recovery processes to protect critical data. They play a key role in planning and executing upgrades and migrations, as well as implementing best practices for system performance and security.

2. System Administrator I

Hibret Bank S.C,

Oct 17/2022- May 23/2025

A System Administrator I professional is responsible for the installation, configuration, maintenance, and support of computer systems and networks within an organization. Their duties typically include monitoring system performance, troubleshooting hardware and software issues, performing backups and updates, ensuring security protocols are followed, and assisting users with technical problems. They often work under supervision and gradually take on more complex tasks as they gain experience.

3. Hardware Engineer I

Hibret Bank S.C,

Jul /1/2021 - Oct /16/2022

A Hardware Engineer is a skilled professional responsible for designing, developing, and testing computer hardware components and systems. They work on a variety of projects, from creating circuit boards and processors to integrating systems that enhance the performance and functionality of electronic devices. This role involves a deep understanding of electronic engineering principles, proficiency in software tools for simulations and design, and hands-on experience with prototyping and testing hardware solutions. Hardware engineers collaborate closely with software engineers to ensure seamless integration of hardware and software, often participating in the entire product lifecycle from conception to deployment.

4. Associate Hardware Engineer

Hibret Bank S.C,

Jan 22/2020 - 6/30/2021

An Associate Hardware Engineer is a professional responsible for supporting the design, development, testing, and troubleshooting of electronic hardware components and systems. They assist in the creation of schematics, layout designs, and prototype development, ensuring that hardware specifications meet project requirements. Additionally, they conduct testing and analysis to identify and resolve hardware issues, collaborate with cross-functional teams such as software engineers and product designers, and document technical processes and findings. Their role is vital in ensuring the reliability, performance, and quality of hardware products, while continuously learning and applying new technologies to contribute effectively to engineering projects

5. Cooperating and Labor, Social Affair Manager

Addis ketema Sub city woreda 7 Administration Governmental Organization

Sept 11/2018 to Jan 21/2020

A Cooperating and Labor Social Affairs Manager is a professional responsible for overseeing and managing labor relations, workforce cooperation, and social welfare initiatives within an organization. Their role involves fostering positive relationships between the company and its employees, ensuring compliance with labor laws and regulations, and promoting a harmonious working environment. They coordinate labor negotiations, handle employee grievances, and implement policies that support workforce wellbeing and social responsibility. Additionally, they work closely with external agencies and community organizations to enhance social programs and corporate social responsibility efforts, aiming to create a productive, fair, and socially responsible workplace.

6. IT Officer

Addis ketema Sub city woreda 7 Administration Governmental Organization

May 23/2017 to Sept 5/2018

An IT Officer is a professional responsible for managing and maintaining an organization's information technology systems. Their duties include overseeing hardware and software installations, ensuring network security, troubleshooting technical issues, and providing technical support to staff. They play a vital role in implementing IT policies, managing data backups, and ensuring the smooth operation of IT infrastructure to

support the organization's objectives. Additionally, an IT Officer stays updated with the latest technology trends and ensures that the organization's IT resources are secure, efficient, and aligned with business needs. Their expertise is crucial in minimizing downtime, safeguarding sensitive information, and enhancing overall operational productivity.

7. ICT Instructor and Office Assistant

Express Hotel Tourism and Technology College Addis Ababa,

Jul 08 / 2016 to Apr 4 / 2017

An ICT Instructor teaches digital skills and updates on technology, while an Office Assistant handles administrative tasks to ensure smooth daily operations. Both roles require organization, technical knowledge, and effective communication, contributing to the organization's efficiency and technological competence.

PROJECT AND PORTFOLIO

PROJECT DETAIL PROJECT: 1

Title: - Clinic Patient Recording Management System

Description:

This is website Using Create Data base, PHP Programming Languages which enable to view, edit, insert, and update detailed information authorized by user

PROJECT DETAIL PROJECT: 2

Title: - Design and improve virtual local area (VLAN) Networking

Description

Upgrade existed Design and improves VLAN Networking using subletting network and create virtual local area\VLAN, protocols, and configuration practices of intermediate

PROJECT DETAIL PROJECT: 3

Title: - Embedded System Design for the on Developing Auto Car Remote Control Description

Embedded System Design for the on Developing Auto Car Remote Control Description: Programmed the control software in C Programming Language and Proteus and Electronic workbench for the device running on PC Designed multi-channel mode

PROJECT DETAIL PROJECT: 4

Title: - Embedded System Design for the on-Bomb detection Robot

Description

The embedded system for an on-bomb detection robot is a compact and efficient electronic setup that integrates sensors, processors, and communication modules to accurately detect explosives. It processes data from various sensors in real-time, enabling quick decision-making and safe navigation in dangerous

environments. The design focuses on robustness, power efficiency, and reliable communication, ensuring effective detection and safety during de-mining operations.

PROJECT DETAIL PROJECT: 5

Title:-Amharic Memes Sentiment Analysis Using Deep Learning

Description

Memes have become a popular way for people to communicate on social media. They often capture deep emotions and social commentary. This study uses deep learning techniques to analyze the emotional content of Amharic memes to explain the deep emotions in these cultural media. The large collection of Amharic memes is categorized into good, bad, and neutral. It covers many topics including social, political, and cultural. The large collection of Amharic memes we created included positive, negative, and neutral emotions. This study uses various deep learning techniques, such as transformer-based models such as RNN, LSTM, convolutional neural networks (CNNs), and Combined CNN-LSTM customized for Amharic. Since memes are often created through the interaction of visual and textual content, this link examines the textual and visual aspects of memes.

The performance of Long Short-Term Memory (LSTM), Convolutional Neural Networks (CNN), and a combined CNN-LSTM architecture in sentiment classification tasks using varied network configurations and training-test splits. The LSTM model displayed superior accuracy, achieving a peak of 85.31% with a 90/10% train-test split while demonstrating strong precision and recall metrics, particularly in identifying Neutral sentiment. CNN, on the other hand, the combined CNN-LSTM architecture improved modestly, peaking at 83.21%, demonstrating the advantages of merging spatial and temporal studies. The findings imply that, especially in smaller datasets, overfitting may emerge from increased model complexity. However, should concentrate on deeper architectures and hyperparameter optimization to improve prediction performance.
